

EXECUTIVE THESIS

Give every strategic priority a traceable path to outcome.

Metrc's Chief of Staff opportunity is to turn a growing portfolio of company priorities into one decision-ready operating trace: outcome, owner, dependencies, threshold, evidence, and closure.

The actual mandate

Increase the CEO's leverage and the Executive Leadership Team's execution velocity by making strategic priorities easier to understand, decide, own, and complete - without centralizing functional ownership or creating a shadow operating system.

WHY THE ROLE MATTERS NOW

SCALE

30 regulatory contracts and 500,000+ users

TRANSFORMATION

Modernized UI, Industry Sandbox, strategic product management

EXPANSION

Retail ID, APIs, new markets, and ecosystem partnerships

COMPANY-MOMENT INTERPRETATION

Metrc's public signals describe a company moving from category-defining track-and-trace infrastructure toward a broader enterprise-grade regulatory technology platform. That creates simultaneous pressure across reliability, user experience, market implementation, product strategy, partner interfaces, public safety, and growth. The Chief of Staff is likely intended to keep those efforts strategically coherent and operationally accountable.

CORE OPERATING TENSIONS

TENSION	WHAT THE ROLE MUST PROTECT	WHAT THE ROLE MUST ACCELERATE
Speed vs regulatory trust	Reliability, public safety, and decision integrity	Product and market execution
Modernization vs continuity	Daily user and government operations	Enterprise-grade platform evolution
Standardization vs local reality	Market-specific configuration and adoption	Reusable operating patterns
CEO leverage vs executive ownership	Clear functional accountability	Cross-functional alignment and closure

Not another project dashboard

The trace is a lightweight executive decision record. It lives above functional project plans and below strategy decks, preserving ownership while making cross-functional movement visible.

THE SIX FIELDS

01 OUTCOME TAG	What must become true? State the business, customer, regulatory, or public-value outcome in observable terms.
02 ACCOUNTABLE CUSTODY	Who owns movement? Name the executive owner, operating owner, and boundaries that remain with each function.
03 DEPENDENCY MAP	What conditions must connect? Expose product, engineering, market, customer, partner, legal, data, adoption, and capacity dependencies.
04 DECISION THRESHOLD	What requires executive judgment? Define local authority, escalation triggers, stop criteria, and the actual decision maker.
05 EVIDENCE RECEIPT	What proves movement? Use a balanced set of outcome, reliability, adoption, economics, trust, and learning signals.
06 CLOSURE / LEARNING	What should compound? Record the decision, result, residual risk, and reusable learning; retire the record when complete.

EXECUTIVE OPERATING RHYTHMS

RHYTHM	PURPOSE	OUTPUT
Weekly exception review	Resolve cross-functional constraints and attention shifts	Decision, owner, due date, or explicit no-action
Monthly business trace review	Connect initiatives to operating and customer evidence	Continue, adjust, scale, hold, or stop
Quarterly strategy-to-capacity reset	Reconcile ambition, capacity, economics, and risk	Portfolio concentration and priority retirement
Event-driven decision huddle	Act when a threshold is crossed	Decision receipt within 24 hours

SUCCESS MEASURES FOR THE CHIEF OF STAFF MECHANISM

DECISION QUALITY

Fewer unresolved or repeatedly revisited decisions

EXECUTION

Shorter time from exception to accountable action

FOCUS

More executive attention on high-leverage priorities

Evidence and transferability

VERIFIED PROOF MAP

Russell Dudek

EVIDENCE SELECTED FOR THE MANDATE

EVIDENCE	VERIFIED OPERATING PATTERN	RELEVANCE TO METRC
Vape-Jet Director of Operations	Current cannabis-tech operating transformation across production, quality, support, engineering issue flow, ERP, CRM, telemetry, and AI-assisted workflows.	Direct domain adjacency plus cross-functional visibility and execution in a software-enabled equipment business.
Amazon Operations Management / Site Leader	Launch, 24/7 cadence, throughput visibility, escalation paths, standard work, and customer-backward mechanisms.	Evidence of operating rhythm and accountability at scale.
Compunetics Director of Operations and Engineering Management	High-reliability engineering, manufacturing, quality systems, complex programs, and customer delivery.	Technical credibility, process control, quality, and cross-functional execution.
DudeWorth Founder / Advisor	AI-readiness, decision records, human authority, governance, adoption, evaluation, and workflow design.	Ability to attach emerging technology to work, decisions, risk, and measurable value.
ZeusVu Chief Pilot	Regulated field operations with a 100% safety record and no FAA incidents.	Respect for authority, safety, chain of custody, and high-consequence execution.

Affirmative contribution case

Russell's value is not a prior Chief of Staff title. It is the repeated ability to enter complex operating systems, make work visible, connect technical and business teams, create decision and accountability mechanisms, and move ambiguous priorities toward measurable outcomes.

IMMEDIATE CONTRIBUTION PROFILE

Day-one strengths

- Cross-functional operating diagnostics
- CEO / ELT cadence design
- Priority and dependency mapping
- Technical-to-business translation
- Escalation and follow-through discipline
- Change adoption and training

Role-specific ramp priorities

- Metric's board and investor context
- Government-contract portfolio detail
- Internal product and engineering operating model
- Current executive decision rhythms
- Market implementation playbooks
- Confidential strategic partnerships and economics

INTERVIEW PROOF STRATEGY

Use specific operating examples rather than generalized leadership language. Show how the mechanism worked, who retained authority, what signal changed, how the decision moved, and what evidence showed the work was improving. Where direct Metric context is unavailable, label the operating model as a hypothesis for discovery.

Interview agenda

DISCOVERY, CONTRIBUTION, AND FIRST 120 DAYS

Russell Dudek
<https://russelldudek.github.io/Metric/>

FIVE EXECUTIVE QUESTIONS

1. Which two or three priorities most need the CEO's attention to move - and which currently consume attention without changing outcomes?
2. Where does Metric most often lose decision velocity: incomplete information, unclear ownership, cross-functional dependencies, or risk tolerance?
3. How should the Chief of Staff divide work with the executive team so the role increases accountability rather than centralizing it?
4. What would make platform modernization, market implementations, and product expansion feel like one coherent company strategy rather than parallel programs?
5. At the end of year one, what evidence would convince the CEO and board that this role materially improved execution?

FIRST 120 DAYS - EXECUTIVE SUMMARY

PHASE	PURPOSE	PRIMARY OUTPUT
0-30: Read	Understand strategy, priorities, decision rhythms, trust networks, and execution friction.	Operating-rhythm and decision-latency map.
31-60: Pilot	Apply the Executive Priority Trace to two real priorities using existing data and owners.	Two live traces and agreed decision thresholds.
61-90: Tighten	Remove duplicate reporting and establish exception-based executive follow-through.	CEO / ELT cadence charter and strategic portfolio view.
91-120: Transfer	Embed ownership, learning, and selective scale.	Operating playbook, learning registry, and year-one scorecard.

Closing thesis

Metric's product promise is traceability. The Chief of Staff can make that promise operational inside the company by ensuring every strategic priority has a recognizable outcome, accountable custody, visible dependencies, a decision threshold, evidence of progress, and clean closure.
