

Executive Priority Trace

A LIGHTWEIGHT REVIEW MECHANISM FOR CEO-LEVEL PRIORITIES

Independent candidate artifact
Russell Dudek

ILLUSTRATIVE BASELINE - NOT INTERNAL METRC DATA

Purpose

Make one strategic priority decision-ready without replacing the functional plan. Complete only the fields required to clarify outcome, ownership, dependencies, thresholds, evidence, and closure.

ILLUSTRATIVE TRACE: PLATFORM MODERNIZATION

OUTCOME TAG	Modernize the platform without destabilizing daily regulatory work. Desired result: improved reliability, performance, usability, and strategic product capacity with controlled user adoption.
ACCOUNTABLE CUSTODY	Executive owner: CTO with CEO sponsorship. Operating owners: product, engineering, release, customer experience, support, and market-facing leaders retain functional authority.
DEPENDENCIES	User research, regulator and operator feedback, reliability evidence, migration posture, training, support readiness, integrator impacts, and market-specific constraints.
DECISION THRESHOLD	Next decision: Which release scope and adoption path meet the minimum readiness threshold? Escalate when: reliability, continuity, or cross-market effects exceed functional authority or accepted risk.
EVIDENCE RECEIPT	Reliability and performance trends; user task completion and friction; support demand; migration and adoption; integrator readiness; unresolved exceptions; business value.
CLOSURE / LEARNING	Record the decision, release posture, owner commitments, residual risks, user response, and reusable pattern for the next release or market.

DECISION POSTURE

CURRENT STATE	EXECUTIVE ASK	PRIMARY RISK
Traceable - threshold defined	Approve scope and adoption posture	Readiness fragmented across functions

Priority Exception Review

USE ONLY WHEN A STRATEGIC THRESHOLD IS CROSSED

REVIEW QUESTIONS

QUESTION	DECISION-USEFUL ANSWER
What changed since the last review?	One material fact, risk, dependency, or assumption - not a status narrative.
Why does it matter now?	Effect on outcome, trust, timing, economics, adoption, or regulatory / customer commitments.
Who owns resolution?	Named executive and operating owner; functional boundaries remain explicit.
What decision is required?	A specific choice, approval, tradeoff, escalation, or no-action call.
What evidence is sufficient?	Minimum information needed to decide; avoid analysis without a decision horizon.
What happens next?	Owner, due date, communication, and whether the trace remains open or closes.

BALANCED EVIDENCE FRAME

OUTCOME

Is the intended result moving?

RELIABILITY

Is the system or service stable?

ADOPTION

Are users changing behavior?

ECONOMICS

Is value or capacity improving?

TRUST

Are stakeholders confident?

LEARNING

What should be reused or stopped?

CLOSURE RECEIPT

DECISION	What was decided, by whom, and when?
COMMITMENTS	Which owners accepted which actions and timing?
COMMUNICATION	Who needs to understand the decision, rationale, and next state?
RESIDUAL RISK	What remains uncertain or intentionally accepted?
LEARNING	What pattern should influence the next market, release, product, or partnership decision?
