

INDEPENDENT APPLICATION MATERIALS - CHIEF OF STAFF

Dear Metrcl Hiring Team,

Metrcl's Chief of Staff role is compelling because the central problem is larger than executive coordination. Metrcl is simultaneously scaling regulatory relationships, modernizing an enterprise platform, extending product value through Retail ID and APIs, and supporting a diverse ecosystem of governments, operators, integrators, and consumers. The CEO needs a trusted partner who can keep those priorities connected to clear ownership, decision-quality information, and measurable outcomes without creating another layer of bureaucracy.

That is the work I have repeatedly done across different operating environments. At Vape-Jet, I currently lead an AI-first operating transformation across production, purchasing, quality, customer success, support, engineering issue flow, ERP/ODOO, Jira, HubSpot, Slack, telemetry, and AI-assisted workflows in cannabis technology. At Amazon, I built leadership routines, throughput visibility, escalation paths, standard work, and operating mechanisms in a 24/7 customer-backward environment. At Compunetics, I led engineering, manufacturing, quality, and high-reliability technical programs while building process controls and root-cause disciplines. These roles required the same core capability Metrcl describes: translate vision into priorities, align leaders, clarify ownership, surface risk early, and drive follow-through.

I would bring Metrcl a practical operating thesis: **give every strategic priority a traceable path to outcome**. A lightweight Executive Priority Trace would connect the intended outcome, accountable owner, cross-functional dependencies, decision threshold, evidence, and closure. It would make executive cadence more useful by focusing reviews on decisions and exceptions rather than status performance.

I built an independent candidate vision at <https://russelldudek.github.io/Metrcl/>. It demonstrates this reasoning through the Executive Priority Trace, a 120-day entry plan, a priority review mechanism, and executive questions grounded in Metrcl's public company moment. The work is deliberately framed as a hypothesis for discovery, not as an assumption about undisclosed internal processes.

My background does not depend on having already carried the Chief of Staff title. It depends on a verified pattern of making complex work visible, connecting technical and business teams, creating accountability, and moving priorities through ambiguity. I would welcome the opportunity to discuss how that pattern could strengthen the CEO and Executive Leadership Team at Metrcl.

Carpe diem,

Russell Dudek
